

SUMMER *Love*

Let Summer Love Shine on You

Good things happen when you're riding Fluid Motion—like a great day at the lake, your best set, winning the Masters or the Worlds, or setting a new water-ski record. Fluid Motion water-ski equipment is professionally engineered to feel good. It will inspire you and never let you down.

Fluid Motion delivers the utmost in safety and performance so you can spend more time on the water honing your craft. When you look to the skies above, the love of summer shines on you—you get that feeling riding Fluid Motion.

Revo

Kiss the Sky

Top international athlete Natallia Berdnikava trusted Revo for her record-setting season with exceptional performances at the Masters, Worlds and the Europeans. Boom!

Revo

Just like a good friend, Revo is trustworthy, reliable and has your back. It listens to your every move and responds perfectly. Slip into our heat-moulded custom boot system that fits like a glove for your foot. Revo has set the industry standard, delivering performance that competitors are chasing.

Revo has powered skiers to scores never achieved in the history of water-skiing. Both the Men's and Women's Trick World Records were set with Revo. Novice athletes, professionals and coaches alike love Revo. It offers a truly revolutionary new way to ski great.

Quattro

Age of Aquarius

A National and World Record holder, Quattro performance is second to none. And for Nick Adams, the Australian National Champion and record holder, Quattro is his choice.

Quattro

When the moon is your seventh turn, love will steer the stars. Quattro keeps you on the water, offering superior fit, convenience and performance in all kinds of conditions.

Australian skier Nick Adams surprised the field running into 41 off (10.25 metre) line at his first professional event. Later Nick broke one of the longest standing records in the water-skiing world with his Quattro Autographs beneath him.

You can count on Quattro to deliver a custom heat-moulded fit with the right blend of flex and support for superior skiing in glassy calm conditions to windy, choppy water, warm or cold. Quattro conquers all conditions and helps you progress and achieve your personal best.

Quattro is the industry's only step-in double boot system, allowing quick connect if you want to swap skis mid-set. Quattro is also heralded as the safest boot system with nearly a decade-long proven track record and testimonials worldwide to support it.

In his Evolution Autographs, Jon Travers stunned the field and the pavilion. His name was written in the Master's Tablet Stone as the 2011 Slalom Champion, and along with it, Evolution JT Autographs brightly skimming Robin Lake in the Pine Mountain sunshine.

JT Superstar Autographs
Evolution
(E-Series)

Evolution (E-Series)

Evolution hybrid boots are the lightest ever made for maximum acceleration and sick turns. They use a high-quality lower latex (bungee) lacing system. Evolutions rebound with as much energy as you put into them. They protect all your hard-earned angle and give back full kinetic for the edge change. Evolutions also possess a low centre of gravity on the ski so they ride tip down, allowing you to get—and stay—ahead no matter how short the rope gets. Evolutions are so right in every way, it's as if Spock mind-melded you with your ski. A stacked starting dock, wind, chop and rollers reflecting off a packed grandstand.

Sometimes you have to take the bull by the horns and run with it. Jon Travers hit the water in a run that was as relentless as any in Master's history. His is a true Cinderella story of 4@41 last minute entry, to the last man standing on the water among the deepest and toughest field of skiers ever assembled on Robin Lake.

Connect With Your...

If you're a skier, Fluid Motion has got you connected—literally. Our innovative Slalom and Ski Harness reduces line load so you can go easy and train for muscle memory; with our harness sore muscles get a break.

The Fluid Motion Handle Guard, developed in 2004, reduces the opening of the rope's "V."
If the size of the opening is small it is less likely something could get tangled.

Fluid Motion has applied hydrodynamics engineering and new materials to their specialty line of fins and fin blocks. New carefully-crafted shapes, 0.080 inch sizes and specially engineered American 5052 Alloy offer superior angles and performance skiing. Our fin blocks cut weight in half, at the critical tail location on the ski. Thus, Fluid Motion Fin Blocks result in faster turns and more responsive skiing, and they won't corrode since they are made from an advanced engineered polymer. To make it all work for you, Fluid Motion has pioneered a ski set-up computer program that aids in determining the optimum settings for you and your conditions.

The FM Skier Workbook ensures that your fin area, binding and fin distance to tail setting are all tuned correctly so that you spend more time ripping and less time fiddling. The FM Skier Workbook is a remarkable tool for serious skiers. Fluid Motion has been responsible for many industry firsts because skiing is our priority.

...Summer Love

Love your skiing and your ski. Let the craftspeople at Fluid Motion build some custom love for you with your choice of features and colours, your name and your specifications. This is the Autograph series from Fluid Motion. The highest-quality ski bindings, custom built in your name. Fluid Motion's exclusive Autograph series is available for Revo, Quattro and Evolution boot systems. They are hand-assembled one at a time to your unique specifications. You will love how you feel on the water.

We look forward to sharing what we've learned, engineered and can build for you. In return Fluid Motion water-ski equipment will give you many seasons of summer enjoyment; it's what they've been engineered to do. Some things can't be explained with technical jargon about top-quality features and specifics. Some things need to be felt to be believed.

*This is the summer of love; let
the sun shine down, baby!*
